EDUCATION

University of Waterloo

Bachelor of Computer Science Co-op

Waterloo, Canada

Sept 2026 – Present

SNV International School

ICSE / ISC

India

2026

- ISC 12th Grade: 99.25% | State Topper | 4th in the Country (India)

AWARDS AND CONTESTS

Euclid 2026: 94/100, top 50 of almost 24,000 entrants | **Euclid 2025:** 89/100, top 150 of over 27,000 entrants

AMC 12A 2025: 144/150 (AIME Qualified) | **CSMC 2025:** 60/60 (perfect score, Global Rank 1)

CCC Junior 2025: 73/75 | **CCC Senior 2026:** 39/75 (Honour Roll)

EXPERIENCE

Quantitative Developer

UW Stocks Club

Apr 2026 – Present

Waterloo, Canada

- Built a Python data pipeline ingesting daily OHLCV bars, corporate actions, and fundamentals for 1,000+ US equities via the LSEG API into a Parquet store, with automated checks for missing data, split/dividend adjustments, and survivorship bias, serving as the core data infrastructure for all club research
- Developed a performance attribution engine decomposing returns into sector, factor, and security selection effects using Brinson-Fachler attribution and multi-factor regression, with ex-ante risk metrics and ex-post metrics across all systematic strategies
- Designed an event-driven backtesting engine in Python simulating 20 years of history across 1,000+ tickers, modeling transaction costs, slippage, and point-in-time data to prevent lookahead bias

Software Engineer

Agropac Pvt Ltd

Apr 2025 – Jun 2025

India

- Built backend services in Java and Spring for an in-house ERP covering inventory, orders and invoicing, procurement, production, and a sales pipeline tracking customers, inquiries and leads
- Owned authentication and role-based authorization across multiple sites, modelling roles, permissions and site scoping so each user reached only the records their role allowed
- Built an internal LLM assistant using RAG over ERP data, letting executives query inventory, invoicing, procurement, production, HR, and sales pipeline information in plain English

PROJECTS

Cross-Book | *Python, asyncio, WebSockets, Kalshi API, Polymarket CLOB API, Pandas, NumPy, Plotly*

- Built a fee-exact, depth-aware arbitrage measurement system for Kalshi and Polymarket US: live order books, a recorder and replay, and a paper trader that sizes against available depth

Blur | *Python, FastAPI, aiortc, OpenCV, YOLOv8, React, TypeScript, Firebase*

- Built a real-time video redaction service that runs a live WebRTC stream through YOLOv8 and OpenCV on a FastAPI server, blurring documents, ID cards, bystanders and on-screen text frame by frame

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, C#, SQL, Bash, R

Frameworks: Spring, FastAPI, Flask, Django, Node, React, Angular

AI/ML: TensorFlow, XGBoost, OpenCV, YOLO, ONNX Runtime, CNNs, LSTMs, reinforcement learning, time series forecasting

Technologies: Linux, Git, Docker, Kubernetes, Jenkins, AWS (SageMaker, EC2, S3), Airflow, MongoDB, PostgreSQL
